

TDR™ FEEDERS are specially designed to meet the needs of the Agro-industry and livestock industries. They are made of high-density polyethylene which ensures that they do not alter the taste of water or food and their interior is smooth to prevent the accumulation of bacteria.

SCOPE

TDR™ FEEDERS are made with high-density polyethylene tubes which makes them durable and resistant to inclement weather and livestock damage such as bites or blows. They are also highly adaptable to any type of installation as they can be assembled in different configurations, making them suitable for any farm. They are suitable for all types of livestock both in the field and in the corral, easy to handle, and require no maintenance.

APPLICATIONS

- Animal breeding farm
- Dog breeding kennel
- Livestock farms
- Crop farms
- Dog farms
- Poultry farms
- Fish farms
- Organic farms
- Hunting farms
- Wildlife farms
- Zoos

BENEFITS AND ADVANTAGES

TDR™ FEEDERS are made of high-quality, durable materials that are resistant to UV rays and sunlight, preventing damage and the growth of microorganisms. They are color black, which means they will not fade, rust, or generate algae, making them a great choice for both liquid and solid food. They are a reliable and long-lasting option for farms.
