

TDR FEEDERS®

SEWER SERIES

TDR FEEDERS® are specially designed to meet the needs of the agro-industry and livestock sectors. Manufactured from high-density polyethylene (HDPE), they do not alter the taste of water or food, and their smooth interior surface prevents the accumulation of bacteria.

SCOPE

TDR FEEDERS® are manufactured from high-density polyethylene (HDPE) pipe sections, providing exceptional durability and resistance to inclement weather, UV exposure, and physical livestock damage including bites and impacts. Their modular design allows assembly in multiple configurations, making them adaptable to any farm layout or installation requirement. Suitable for all livestock types – both in open fields and enclosed corrals – they are lightweight, easy to handle, and require no maintenance.

APPLICATIONS

- Animal breeding farms
- Dog breeding kennels
- Livestock farms
- Crop farms
- Dog farms
- Poultry farms
- Fish farms
- Organic farms
- Hunting farms
- Wildlife farms
- Zoos

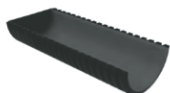

BENEFITS AND ADVANTAGES

TDR FEEDERS® are manufactured from high-quality HDPE, inherently resistant to UV radiation and sunlight, preventing material degradation and inhibiting microorganism growth. Their black pigmentation ensures color permanence – they will not fade, rust, or promote algae formation – making them suitable for both liquid and solid feed applications. The smooth interior surface prevents bacterial accumulation and simplifies cleaning. A reliable, long-service-life solution for any farming operation.
